Edward Szczepanski Report of Samantha Mintzmyer CIS 322 Project

Revoke / Add User are currently not implemented to the assignment 10 specification. I created a user and logged in using the deprecated create_user page and that was successful.

R1: Success
R2: Success
I1: Success; however, maybe it is not best to drop tables preemptively as it seems like something you would do doing debugging and not actually in production. As I get a lot of notices from Postgres.
I2: Fail. Non-existent lost_legacy data.
U1: Currently unfinished, but /create_user was succesful.
U2: Currently unfinished, but /create_user was succesful.
U3: Success
U4: Success
U5: Success
U6: Success
U7: Success
U8: Success
U9: Success
U10: Currently unfinished
O1: Success
O2: Success
O3: Success
O4: Success; however, see bug in notes
O5: Success
O6: Success

Notes:
Mistake on the import section of testdoc. It says I should run the export script while in the import directory. In addition, the sample import files are no where to be seen.

Error Report: After creating a facility (and not logging in?), I hit the dashboard button. I was presented with an Internal Server Error. Same thing with the add_asset page.

After disposing of an asset, I go back to the add asset interface and I see two entries in the table. One that says disposed, the other saying it is at my original facility.
